Handbook of Fourier Analysis & Its Applications

Robert J. Marks II

OXFORD
UNIVERSITY PRESS

2008

Contents

Preface vi
Acronym List ix
Notation xi

1 Introduction 3
1.1 Ubiquitous Fourier Analysis 3
1.2 Jean Baptiste Joseph Fourier 4
1.3 This Book 6
1.3.1 Surveying the Contents 6

2 Fundamentals of Fourier Analysis 10
2.1 Introduction 10
2.2 Signal Classes 11
2.3 The Fourier Transform 13
2.3.1 The Continuous Time Fourier Transform 14
2.3.2 The Fourier Series 14
2.3.2.1 Parseval's Theorem for the Fourier Series 16
2.3.2.2 Convergence 16
2.3.3 Relationship Between Fourier and Laplace Transforms 18
2.3.4 Some Continuous Time Fourier Transform Theorems 18
2.3.4.1 The Derivative Theorem 18
2.3.4.2 The Convolution Theorem 19
2.3.4.3 The Inversion Theorem 19
2.3.4.4 The Duality Theorem 19
2.3.4.5 The Scaling Theorem 20
2.3.5 Some Continuous Time Fourier Transform Pairs 20
2.3.5.1 The Dirac Delta Function 20
2.3.5.2 Trigonometric Functions 21
2.3.5.3 The Sinc and Related Functions 27
2.3.5.4 The Rectangle Function 28
2.3.5.5 The Signum Function 29
2.3.5.6 The Gaussian 30
2.3.5.7 The Comb Function 31
2.3.5.8 The Triangle Function 32
2.3.5.9 The Array Function 32
2.3.5.10 The Gamma Function†‡ 35
2.3.5.11 The Beta Function‡ 36

2.3.5.12 Bessel Functions[†‡] 37
2.3.5.13 The Sine Integral 39
2.3.5.14 Orthogonal Polynomials[¶] 40
2.3.6 Other Properties of the Continuous Time Fourier Transform 45
2.3.6.1 The Signal Integral Property 45
2.3.6.2 Conjugate Symmetry of a Real Signal's Spectrum 45
2.3.6.3 The Hilbert Transform 46
2.3.6.4 Hilbert Transform Relationships Within a Causal Signals' Spectrum 46
2.3.6.5 The Power Theorem 47
2.3.6.6 The Poisson Sum Formula 47
2.4 Orthogonal Basis Functions[¶] 48
2.4.1 Parseval's Theorem for an Orthonormal Basis[¶] 48
2.4.2 Examples[¶] 49
2.4.2.1 The Cardinal Series[¶] 49
2.4.2.2 The Fourier Series[¶] 49
2.4.2.3 Prolate Spheroidal Wave Functions[¶] 49
2.4.2.4 Complex Walsh Functions[§] 50
2.4.2.5 Orthogonal Polynomials[¶] 50
2.4.2.6 Fourier Transforms of Orthonormal Functions are Orthonormal[¶] 50
2.5 The Discrete Time Fourier Transform 50
2.5.1 Relation of the DFT to the Continuous Time Fourier Transform 50
2.6 The Discrete Fourier Transform 52
2.6.1 Circular Convolution 53
2.6.2 Relation to the Continuous Time Fourier Transform 54
2.6.3 DFT Leakage 55
2.7 Related Transforms 56
2.7.1 The Cosine Transform[†] 56
2.7.2 The Sine Transform[†] 57
2.7.3 The Hartley Transform 57
2.7.4 The z Transforms 58
2.8 Exercises 60
2.9 Solutions for Selected Chapter 2 Exercises 72

3 Fourier Analysis in Systems Theory 104
3.1 Introduction 104
3.2 System Classes 104
3.2.1 System Types 104
3.2.1.1 Homogeneous Systems 104
3.2.1.2 Additive Systems 105
3.2.1.3 Linear Systems 105
3.2.1.4 Time-Invariant Systems 106
3.2.1.5 LTI Systems 106
3.2.1.6 Causal Systems 107
3.2.1.7 Memoryless Systems 107
3.2.1.8 Stable Systems 107
3.2.1.9 Invertible Systems 107
3.2.2 Example Systems 107
3.2.2.1 The Magnifier 108
3.2.2.2 The Fourier Transformer 109
3.2.2.3 Convolution 110

3.3 System Characterization 112
3.3.1 Linear System Characterization 112
3.3.1.1 Continuous Time Systems 112
3.3.1.2 Discrete Time Systems 113
3.3.2 Causal Linear Systems 113
3.3.3 Linear Time Invariant (LTI) Systems 114
3.3.3.1 Convolution Algebra 115
3.3.3.2 Convolution Mechanics 117
3.3.3.3 Circular Convolution Mechanics 118
3.3.3.4 Step and Ramp Response Characterization 118
3.3.3.5 Characterizing an LTI System 120
3.3.3.6 Filters 120
3.4 Amplitude Modulation 122
3.4.1 Coherent Demodulation 122
3.4.1.1 Loss of Coherence and Fading 124
3.4.2 Envelope Demodulation 124
3.5 Goertzel's Algorithm for Computing the DFT 125
3.6 Fractional Fourier Transforms 126
3.6.1 Periodicity of the Fourier Transform Operator 126
3.6.2 Fractional Fourier Transform Criteria 127
3.6.3 The Weighted Fractional Fourier Transform 128
3.7 Approximating a Linear System with LTI Systems 129
3.7.1 Examples of the Piecewise Invariant Approximation 130
3.7.1.1 The Magnifier 130
3.7.1.2 The Fourier Transformer 131
3.8 Exercises 132
3.9 Solutions for Selected Chapter 3 Exercises 139

4 Fourier Transforms in Probability, Random Variables and Stochastic Processes 151
4.1 Introduction 151
4.2 Random Variables 151
4.2.1 Probability Density Functions, Expectation, and Characteristic Functions 152
4.2.1.1 Discrete Random Variables 152
4.2.1.2 Moments from the Characteristic Functions 154
4.2.1.3 Chebyshev's Inequality 157
4.2.2 Example Probability Functions, Characteristic Functions, Means and Variances 158
4.2.2.1 The Uniform Random Variable 159
4.2.2.2 The Triangle Random Variable 159
4.2.2.3 The Gaussian Random Variable 159
4.2.2.4 The Exponential Random Variable 160
4.2.2.5 The Laplace Random Variable 161
4.2.2.6 The Hyperbolic Secant Random Variable 161
4.2.2.7 The Gamma Random Variable 162
4.2.2.8 The Beta Random Variable 164
4.2.2.9 The Cauchy Random Variable 166
4.2.2.10 The Deterministic Random Variable 168
4.2.2.11 The Bernoulli Random Variable 169
4.2.2.12 The Discrete Uniform Random Variable 169

4.2.2.13 The Binomial Random Variable 170
4.2.2.14 The Poisson Random Variable 171
4.2.3 Distributions of Sums of Random Variables 173
4.2.3.1 The Sum of Independent Random Variables 174
4.2.3.2 Distributions Closed Under Independent Summation 174
4.2.3.3 The Sum of i.i.d. Random Variables 176
4.2.3.4 The Average of i.i.d. Random Variables 176
4.2.4 The Law of Large Numbers 177
4.2.4.1 Stochastic Resonance 178
4.2.5 The Central Limit Theorem 179
4.2.5.1 The Central Limit Theorem Applied to Randomly Generated Probability Density Functions 187
4.2.5.2 Random Variables That Are Asymptotically Gaussian 189
4.3 Uncertainty in Wave Equations 190
4.4 Stochastic Processes 193
4.4.1 First and Second Order Statistics 194
4.4.1.1 Stationary Processes 195
4.4.2 Power Spectral Density 196
4.4.3 Some Stationary Noise Models 197
4.4.3.1 Stationary Continuous White Noise 197
4.4.3.2 Stationary Discrete White Noise 198
4.4.3.3 Laplace Autocorrelation 198
4.4.3.4 Ringing Laplace Autocorrelation 198
4.4.4 Linear Systems with Stationary Stochastic Inputs 198
4.4.5 Properties of the Power Spectral Density 200
4.4.5.1 Second Moment 200
4.4.5.2 Realness 200
4.4.5.3 Nonnegativity 200
4.5 Exercises 201
4.6 Solutions for Selected Chapter 4 Exercises 204

5 The Sampling Theorem 217
5.1 Introduction 217
5.1.1 The Cardinal Series 217
5.1.2 History 218
5.2 Interpretation 220
5.3 Proofs 220
5.3.1 Using Comb Functions 221
5.3.1.1 Aliasing 222
5.3.1.2 The Resulting Cardinal Series 222
5.3.2 Fourier Series Proof 222
5.3.3 Papoulis' Proof 223
5.4 Properties 223
5.4.1 Convergence 223
5.4.1.1 For Finite Energy Signals 224
5.4.1.2 For Bandlimited Functions with Finite Area Spectra 224
5.4.2 Trapezoidal Integration 225
5.4.2.1 Of Bandlimited Functions 225
5.4.2.2 Of Linear Integral Transforms 226

5.4.2.3 Derivation of the Low Passed Kernel 227
5.4.2.4 Parseval's Theorem for the Cardinal Series 231
5.4.3 The Time-Bandwidth Product 231
5.5 Application to Spectra Containing Distributions 232
5.6 Application to Bandlimited Stochastic Processes 233
5.7 Exercises 234
5.8 Solutions for Selected Chapter 5 Exercises 236

6 Generalizations of the Sampling Theorem 242
6.1 Introduction 242
6.2 Generalized Interpolation Functions 242
6.2.1 Oversampling 243
6.2.2 Restoration of Lost Samples 243
6.2.2.1 Sample Dependency 243
6.2.2.2 Restoring a Single Lost Sample 243
6.2.2.3 Restoring M Lost Samples 245
6.2.2.4 Direct Interpolation from M Lost Samples 246
6.2.2.5 Relaxed Interpolation Formulae 247
6.2.3 Criteria for Generalized Interpolation Functions 248
6.2.3.1 Interpolation Functions 248
6.2.4 Reconstruction from a Filtered Signal's Samples 250
6.2.4.1 Restoration of Samples from an Integrating Detector 250
6.3 Papoulis' Generalization 252
6.3.1 Derivation 252
6.3.2 Interpolation Function Computation 256
6.3.3 Example Applications 257
6.3.3.1 Recurrent Nonuniform Sampling 257
6.3.3.2 Interlaced Signal–Derivative Sampling 258
6.3.3.3 Higher Order Derivative Sampling 259
6.3.3.4 Effects of Oversampling in Papoulis' Generalization 261
6.4 Derivative Interpolation 261
6.4.1 Properties of the Derivative Kernel 262
6.5 A Relation Between the Taylor and Cardinal Series 265
6.6 Sampling Trigonometric Polynomials 266
6.7 Sampling Theory for Bandpass Functions 267
6.7.1 Heterodyned Sampling 268
6.7.2 Direct Bandpass Sampling 270
6.8 A Summary of Sampling Theorems for Directly Sampled Signals 271
6.9 Lagrangian Interpolation 272
6.10 Kramer's Generalization 273
6.11 Exercises 274
6.12 Solutions for Selected Chapter 6 Exercises 278

7 Noise and Error Effects 288
7.1 Introduction 288
7.2 Effects of Additive Data Noise 288
7.2.1 On Cardinal Series Interpolation 288
7.2.1.1 Interpolation Noise Level 289
7.2.1.2 Effects of Oversampling and Filtering 290

7.2.2 Interpolation Noise Variance for Directly Sampled Signals 293
7.2.2.1 Interpolation with Lost Samples 294
7.2.2.2 Bandpass Functions 301
7.2.3 On Papoulis' Generalization 302
7.2.3.1 Examples 304
7.2.3.2 Notes 304
7.2.4 On Derivative Interpolation 306
7.2.5 A Lower Bound on the NINV 308
7.2.5.1 Examples 309
7.3 Jitter 313
7.4 Filtered Cardinal Series Interpolation 314
7.4.1 Unbiased Interpolation from Jittered Samples 314
7.4.2 Effects of Jitter In Stochastic Bandlimited Signal Interpolation 316
7.4.2.1 NINV of Unbiased Restoration 318
7.4.2.2 Examples 318
7.5 Truncation Error 320
7.5.1 An Error Bound 320
7.6 Exercises 322
7.7 Solutions for Selected Chapter 7 Exercises 324

8 Multidimensional Signal Analysis 326
8.1 Introduction 326
8.2 Notation 327
8.3 Visualizing Higher Dimensions 328
8.3.1 *N* Dimensional Tic Tac Toe 328
8.3.2 Vectorization 329
8.4 Continuous Time Multidimensional Fourier Analysis 330
8.4.1 Linearity 332
8.4.2 The Shift Theorem 332
8.4.3 Multidimensional Convolution 333
8.4.3.1 The Mechanics of Two Dimensional Convolution 334
8.4.4 Separability 334
8.4.5 Rotation, Scale and Transposition 336
8.4.5.1 Transposition 337
8.4.5.2 Scale 337
8.4.5.3 Rotation 337
8.4.5.4 Sequential Combination of Operations 338
8.4.5.5 Rotation in Higher Dimensions 339
8.4.5.6 Effects of Rotation, Scale and Transposition on Fourier Transformation 340
8.4.6 Fourier Transformation of Circularly Symmetric Functions 341
8.4.6.1 The Two Dimensional Fourier Transform of a Circle 343
8.4.6.2 Generalization to Higher Dimensions 343
8.4.6.3 Polar Representation of Two Dimensional Functions that are Not Circularly Symmetric 344
8.5 Characterization of Signals from their Tomographic Projections 345
8.5.1 The Abel Transform and Its Inverse 345
8.5.1.1 The Abel Transform in Higher Dimensions 347
8.5.2 The Central Slice Theorem 348
8.5.3 The Radon Transform and Its Inverse 349

8.6 Fourier Series 352
8.6.1 Multidimensional Periodicity 352
8.6.2 The Multidimensional Fourier Series Expansion 356
8.6.3 Multidimensional Discrete Fourier Transforms 359
8.6.3.1 Evaluation 360
8.6.3.2 The Role of Phase in Image Characterization 360
8.7 Discrete Cosine Transform-Based Image Coding 360
8.7.1 DCT Basis Functions 362
8.7.2 The DCT in Image Compression 362
8.8 McClellan Transformation for Filter Design 366
8.8.1 Modular Implementation of the McClellan Transform 372
8.8.2 Implementation Issues 373
8.9 The Multidimensional Sampling Theorem 373
8.9.1 The Nyquist Density 376
8.9.1.1 Circular and Rectangular Spectral Support 377
8.9.1.2 Sampling Density Comparisons 379
8.9.2 Generalized Interpolation Functions 380
8.9.2.1 Tightening the Integration Region 380
8.9.2.2 Allowing Slower Roll Off 381
8.10 Restoring Lost Samples 382
8.10.1 Restoration Formulae 382
8.10.1.1 Lost Sample Restoration Theorem 382
8.10.1.2 Restoration of a Single Lost Sample 383
8.10.2 Noise Sensitivity 383
8.10.2.1 Filtering 385
8.10.2.2 Deleting Samples from Optical Images 385
8.11 Periodic Sample Decimation and Restoration 387
8.11.1 Preliminaries 387
8.11.2 First Order Decimated Sample Restoration 390
8.11.3 Sampling Below the Nyquist Density 392
8.11.3.1 The Square Doughnut 392
8.11.3.2 Sub-Nyquist Sampling of Optical Images 393
8.11.4 Higher Order Decimation 393
8.12 Raster Sampling 395
8.12.1 Bandwidth Equivalence of Line Samples 397
8.13 Exercises 398
8.14 Solutions for Selected Chapter 8 Exercises 404

9 Time-Frequency Representations 411
9.1 Introduction 411
9.2 Short Time Fourier Transforms and Spectrograms 413
9.3 Filter Banks 413
9.3.1 Commonly Used Windows 415
9.3.2 Spectrograms 415
9.3.3 The Mechanics of Short Time Fourier Transformation 416
9.3.3.1 The Time Resolution Versus Frequency Resolution Trade Off 416
9.3.4 Computational Architectures 417
9.3.4.1 Modulated Inputs 418
9.3.4.2 Window Design Using Truncated IIR Filters 419
9.3.4.3 Modulated Windows 423

9.4 Generalized Time-Frequency Representations 424
9.4.1 GTFR Mechanics 425
9.4.2 Kernel Properties 426
9.4.3 Marginals 427
9.4.3.1 Kernel Constraints 428
9.4.4 Example GTFR's 431
9.4.4.1 The Spectrogram 431
9.4.4.2 The Wigner Distribution 434
9.4.4.3 Kernel Synthesis Using Spectrogram Superposition 434
9.4.4.4 The Cone Shaped Kernel 434
9.4.4.5 Cone Kernel GTFR Implementation Using Short Time Fourier Transforms 435
9.4.4.6 Cone Kernel GTFR Implementation for Real Signals 438
9.4.4.7 Kernel Synthesis Using POCS 438
9.5 Exercises 439
9.6 Solutions for Selected Chapter 9 Exercises 442

10 Signal Recovery 447
10.1 Introduction 447
10.2 Continuous Sampling 447
10.3 Interpolation From Periodic Continuous Samples 450
10.3.1 The Restoration Algorithm 451
10.3.1.1 Trigonometric Polynomials 453
10.3.1.2 Noise Sensitivity 456
10.3.2 Observations 461
10.3.2.1 Comparison with the NINV of the Cardinal Series 461
10.3.2.2 In the Limit as an Extrapolation Algorithm 462
10.3.2.3 Application to Interval Interpolation 463
10.4 Interpolation of Discrete Periodic Nonuniform Decimation 463
10.4.1 Problem Description 466
10.4.1.1 Degree of Aliasing 467
10.4.1.2 Interpolation 467
10.4.1.3 The $\mathbf{A}[N, P]$ Matrix 470
10.4.2 The Periodic Functions, $\Psi_M(v)$ 470
10.4.3 Quadrature Version 472
10.5 Prolate Spheroidal Wave Functions 473
10.5.1 Properties 473
10.5.2 Application to Extrapolation 475
10.5.3 Application to Interval Interpolation 476
10.6 The Papoulis-Gerchberg Algorithm 477
10.6.1 The Basic Algorithm 477
10.6.1.1 An Alternate Derivation of the PGA Using Operators 479
10.6.1.2 Application to Interpolation 480
10.6.2 Proof of the PGA using PSWF's 480
10.6.3 Remarks 482
10.7 Exercises 482
10.8 Solutions for Selected Chapter 10 Exercises 486

11 Signal and Image Synthesis: Alternating Projections Onto Convex Sets 495
11.1 Introduction 495

11.2 Geometical POCS 496
11.2.1 Geometrical Convex Sets 496
11.2.2 Projecting onto a Convex Set 497
11.2.3 POCS 498
11.3 Convex Sets of Signals 501
11.3.1 The Hilbert Space 502
11.3.1.1 Convex Sets 503
11.3.1.2 Subspaces 503
11.3.1.3 Null Spaces 503
11.3.1.4 Linear Varieties 504
11.3.1.5 Cones 504
11.3.1.6 Convex Hulls and Convex Cone Hulls 504
11.3.2 Some Commonly Used Convex Sets of Signals 504
11.3.2.1 Matrix equations 505
11.3.2.2 Bandlimited Signal 507
11.3.2.3 Duration Limited Signals 507
11.3.2.4 Real Transform Positivity 508
11.3.2.5 Constant Area Signals 508
11.3.2.6 Bounded Energy Signals 511
11.3.2.7 Constant Phase Signals 511
11.3.2.8 Bounded Signals 512
11.3.2.9 Signals With Identical Middles 513
11.4 Example Applications of POCS 514
11.4.1 Von Neumann's Alternating Projection Theorem 514
11.4.2 Solution of Simultaneous Equations 514
11.4.3 The Papoulis-Gerchberg Algorithm 514
11.4.4 Howard's Minimum-Negativity-Constraint Algorithm 516
11.4.5 Associative Memory 516
11.4.5.1 Template Matching 517
11.4.5.2 POCS Based Associative Memories 517
11.4.5.3 POCS Associative Memory Examples 517
11.4.5.4 POCS Associative Memory Convergence 521
11.4.5.5 POCS Associative Memory Capacity 526
11.4.5.6 Heteroassociative Memory 527
11.4.6 Recovery of Lost Image Blocks 527
11.4.7 Subpixel Resolution 532
11.4.7.1 Formulation as a Set of Linear Equations 532
11.4.7.2 Subpixel Resolution using POCS 533
11.4.8 Reconstruction of Images from Tomographic Projections 533
11.4.9 Correcting Quantization Error for Oversampled Bandlimited Signals 535
11.4.10 Kernel Synthesis for GTFR's 537
11.4.10.1 GTFR Constraints as Convex Sets 537
11.4.10.2 GTFR Kernel Synthesis Using POCS 543
11.4.11 Application to Conformal Radiotherapy 545
11.4.11.1 Convex Constraint Sets 547
11.4.11.2 Example Applications 557
11.5 Generalizations 558
11.5.1 Iteration Relaxation 558
11.5.2 Contractive and Nonexpansive Operators 558
11.5.2.1 Contractive and Nonexpansive Functions 559

11.6 Exercises 563
11.7 Solutions for Selected Chapter 11 Exercises 567

12 Mathematical Morphology and Fourier Analysis on Time Scales 570
12.1 Introduction 570
12.2 Mathematical Morphology Fundamentals 570
12.2.1 Minkowski Arithmetic 570
12.2.2 Relation of Convolution Support to the Operation of Dilation 572
12.2.3 Other Morphological Operations 573
12.2.4 Minkowski Algebra 576
12.3 Fourier and Signal Analysis on Time Scales 583
12.3.1 Background 586
12.3.1.1 The Hilger Derivative 586
12.3.1.2 Hilger Integration 587
12.3.2 Fourier Transforms on a Time Scale 587
12.3.3 The Minkowski Sum of Time Scales 590
12.3.4 Convolution on a Time Scale 592
12.3.4.1 Convolution on Discrete Time Scales 592
12.3.4.2 Time Scales in Deconvolution 594
12.3.5 Additively Idempotent Time Scales 595
12.3.5.1 AITS Hulls 596
12.3.5.2 AITS Examples 596
12.3.5.3 AITS Conservation 597
12.3.5.4 Asymptotic Graininess of $\mathbb{A}_{\xi\eta}$ 597
12.3.6 Discrete Convolution of AITS' 601
12.3.6.1 Applications 601
12.3.7 Multidimensional AITS Time Scales 604
12.4 Exercises 608
12.5 Solutions for Selected Chapter 12 Exercises 609

13 Applications 610
13.1 The Wave Equation, Its Fourier Solution and Harmony in Western Music 610
13.1.1 The Wave Equation 610
13.1.2 The Fourier Series Solution 612
13.1.3 The Fourier Series and Western Harmony 613
13.1.4 Pythagorean Harmony 614
13.1.4.1 Melodies of Harmonics: Bugle Tunes 616
13.1.4.2 Pythagorean and Tempered String Vibrations 617
13.1.5 Harmonics Expansions Produce Major Chords and the Major Scale 618
13.1.5.1 Subharmonics Produce Minor Keys 620
13.1.5.2 Combining the Harmonic and Subharmonic Expansions Approximates the Tempered Chromatic Scale 621
13.1.6 Fret Calibration 621
13.1.6.1 Comments 623
13.2 Fourier Transforms in Optics and Wave Propagation 623
13.2.1 Scalar Model for Wave Propagation 624
13.2.1.1 The Wave Equation 624
13.2.1.2 Solutions to the Wave Equation 626
13.2.2 The Angular Spectrum 627

13.2.2.1 Plane Waves as Frequencies 628
13.2.2.2 Propagation of the Angular Spectrum 629
13.2.2.3 Evanescent Waves 630
13.2.3 Rayleigh-Sommerfield Diffraction 630
13.2.3.1 The Diffraction Integral 633
13.2.3.2 The Fresnel Diffraction Integral 633
13.2.3.3 The Fraunhofer Approximation 634
13.2.4 A One Lens System 638
13.2.4.1 Analysis 638
13.2.4.2 Imaging System 640
13.2.4.3 Fourier Transformation 641
13.2.4.4 Implementation of the PGA Using Optics 642
13.2.5 Beamforming 643
13.2.5.1 Apodization 644
13.2.5.2 Beam Steering 644
13.3 Heisenberg's Uncertainty Principle 645
13.4 Elementary Deterministic Finance 646
13.4.1 Some Preliminary Math 647
13.4.2 Compound Interest on a One Time Deposit 647
13.4.2.1 Yield Increases with Frequency of Compounding 648
13.4.2.2 Continuous Compounding 649
13.4.2.3 Different Rates and Compounding Periods – Same Yield 649
13.4.2.4 The Extrema of Yield 650
13.4.2.5 Effect of Annual Taxes 650
13.4.2.6 Effect of Inflation 651
13.4.3 Compound Interest With Constant Periodic Deposits 652
13.4.3.1 Continuous Time Solution 653
13.4.3.2 Be a Millionaire 653
13.4.3.3 Starting With a Nest Egg 654
13.4.4 Loan and Mortgage Payments 655
13.4.4.1 Monthly Payment 655
13.4.4.2 Amortization 656
13.4.4.3 Monthly Payment Over Long Periods of Time 656
13.5 Exercises 656
13.6 Solutions for Selected Chapter 13 Exercises 658

14 Appendices 660
14.1 Schwarz's Inequality 660
14.2 Leibniz's Rule 661
14.3 A Useful Limit 661
14.4 Series 662
14.4.1 Binomial Series 662
14.4.2 Geometric Series 662
14.4.2.1 Derivation 623
14.4.2.2 Trigonometric Geometric Series 663
14.5 Ill-Conditioned Matrices 663
14.6 Other Commonly Used Random Variables 664
14.6.1 The Pareto Random Variable 665
14.6.2 The Weibull Random Variable 666
14.6.3 The Chi Random Variable 667

14.6.4 The Noncentral Chi-Squared Random Variable 667
14.6.5 The Half Normal Random Variable 668
14.6.6 The Rayleigh Random Variable 668
14.6.7 The Maxwell Random Variable 669
14.6.8 The Log Random Variable 669
14.6.9 The Von Mises Variable 670
14.6.10 The Uniform Product Variable 671
14.6.11 The Uniform Ratio Variable 671
14.6.12 The Logistic Random Variable 672
14.6.13 The Gibrat Random Variable 673
14.6.14 The F Random Variable 673
14.6.15 The Noncentral F Random Variable 673
14.6.16 The Fisher-Tippett Random Variable 675
14.6.17 The Gumbel Random Variable 675
14.6.18 The Student's t Random Variable 676
14.6.19 The Noncentral Student's t Random Variable 676
14.6.20 The Rice Random Variable 677
14.6.21 The Planck's Radiation Random Variable 677
14.6.22 The Generalized Gaussian Random Variable 677
14.6.23 The Generalized Cauchy Random Variable 678
